Chengjin Li

Medical Imaging · Agent Systems · Full-Stack AI

M.S. candidate in Information and Communication Engineering at UESTC, with end-to-end experience spanning algorithm research, scientific software, and a live AI-enabled platform.

Phone 17732025285 **Email** chengjinli@std.uestc.edu.cn **Location** Chengdu, China

Accepted by Advanced Science	StudyHub in Production	ISMRM / OHBM 2025
CAS Zone 1 Top / JCR Q1 · IF 14.1	378 users · 1,872 downloads	Oral presentation · Poster presentation

Education

University of Electronic Science and Technology of China	M.S., Information and Communication Engineering	2025—2028
University of Electronic Science and Technology of China	B.Eng., Information and Communication Engineering	2021—2025

Selected Projects

DDSurfer | Cortical Surface Reconstruction from dMRI

Accepted by Advanced Science github.com/ChengjinLii/DDSurfer

- Implemented a cortical reconstruction pipeline from DTI scalar maps to white and pial surfaces, covering preprocessing, dual-stream inference, template-space prediction, and native-space back-projection.
- The related work was accepted by ***Advanced Science*** (**CAS Zone 1 Top / JCR Q1**, **IF 14.1**), establishing a reproducible diffusion-oriented surface reconstruction workflow.

StudyHub | Campus Knowledge-Sharing and AI Learning Platform

378 users / 1,872 downloads github.com/ChengjinLii/studyhub

- Independently designed, built, and operated a campus platform for resource sharing, peer guidance, requests, and marketplace workflows, serving **378 users** with **1,872 downloads**.
- Built intelligent search, recommendation, and moderation workflows, a read-only secure MCP tool boundary, and a learning-agent foundation using FastAPI, Next.js, MySQL, Redis, and OSS.

dMRI-Agent | Protocol-Driven Agent System for dMRI

Manuscript submitted github.com/ChengjinLii/MRI_Agent

- Designed and implemented a protocol-driven agent system for diffusion MRI workflows using planner/executor collaboration and structured protocol control.
- Supports task planning, staged execution, QC tracking, and structured audit logs for reproducible workflow automation and human-in-the-loop control; a related manuscript has been **submitted**.

SlicerDDSurfer | 3D Slicer Extension for dMRI Workflows

Submitted to Nature Protocols github.com/ChengjinLii/SlicerDDSurfer

- Developed a 3D Slicer extension that unifies DDSurfer, DDParcel, DDSeg, and Microstructure pipelines with shared input validation, workflow orchestration, and consistent UI entry points.
- Designed extension points for tractography, connectomics, and visualization; protocol manuscript submitted to ***Nature Protocols***.

Research & Publications

- **2026** ***Advanced Science***: DDSurfer-related work accepted (CAS Zone 1 Top / JCR Q1, IF 14.1).
- **2025** **ISMRM 2025**: research work accepted as an **Oral presentation**.
- **2025** **OHBM 2025**: research work accepted as a **Poster presentation**.
- **2025** **MICCAI PDCADxFoundation Challenge**: Third Prize (5th place) in both classification and segmentation tracks.
- **2025** **ISICDM**: Third Prize (3rd place) in the poster session.

Honors & Awards

- **2026** **HONOR — Academic Star in Information and Communication Engineering**.
- **2026** **First Prize**, AI Track, Southwest Regional Contest, China Graduate Electronics Design Contest.
- **2025** **National Third Prize**, 22nd Huawei Cup China Graduate Mathematical Contest in Modeling; **Team Leader**.
- **2025** UESTC **First-Class Graduate Academic Scholarship**.
- **2024** **National-level project approval**, Undergraduate Innovation and Entrepreneurship Training Program.
- **2024** **Gold Award** (UESTC) and **Silver Award** (Sichuan), China International College Students' Innovation Competition; **Gold** and **Bronze**, 14th Challenge Cup Business Plan Competition.
- **2021—25** UESTC **Outstanding Student Scholarship**, awarded for four consecutive academic years.
- **2025** UESTC **Undergraduate Innovation Award**; graduation project rated **Outstanding**.

Technical Skills

Programming: Python · TypeScript · C · MATLAB

Medical Imaging: 3D Slicer · SimpleITK · nibabel · dMRI

Deep Learning: PyTorch · model training/inference · image algorithms

Full-Stack & Engineering: FastAPI · Next.js · MySQL · Redis · Docker · Git
